

Haikou field test site evidence report: TOPCon technology's comprehensive power generation efficiency is significantly 5.09% higher than that of N-type BC modules.

1、Excellent Low-Irradiance Performance

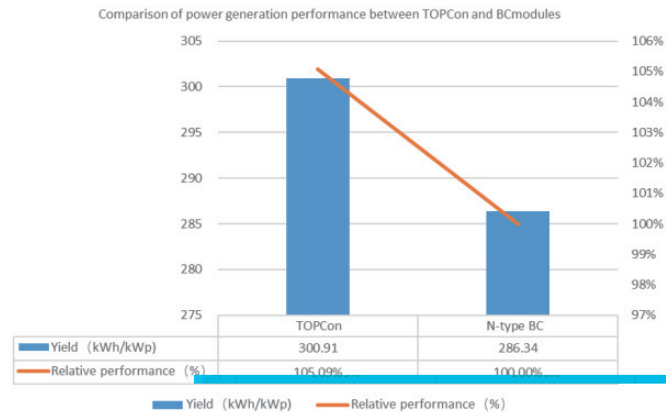

Figure 1: Comparison of power generation per watt between TOPCon and other BC II modules

Project Background

2、High Bifaciality Advantage

Significance:

Module Information

were mounted on the roof using a fixed frame (≈20 °), with the lowest

Test results:

Test situation
